Role: Data Scientist

Location: Leamington Spa

Duration: 18 month contract

Rate: From £17.28 per hour UK PAYE

Data scientists are responsible for the analysis of sample data and correct tracking and recording of the analysis in the appropriate LIMS database, to the lab's accreditation standards. They will be expected to process large data sets accurately and identify anomalous results. Data scientists will work to manage the flow of data out of the laboratories, resulting in correct patient sample reporting. They will also analyse non-clinical data as part of process optimisation and escalate any quality control issues relating to reagent performance to the quality manager.

Please note that whilst data handling experience is required, training for the specific analysis software will be provided.

Essential	Desirable
Education: • Relevant degree or experience as a Data Scientist • BSc, MSc or PhD which covered Data Scientist modules. **Experience:** • Proven track record in processing large scientific data sets accurately • Expert use of database and data analysis tools. **Skills:** • Experience with R or Python	**Experience:** • Practical experience using or administrating Oracle, MS-SQL and Postgres SQL databases • Experience with Sportfire, R or other visualization and analysis package • BSc Honours degree in a biological science • Previous experience within a laboratory environment.
